

REIN4CED SHIFTS INTO HIGHER GEAR

REIN4CED successfully closes € 7.0 million Series B capital increase to support its growth as European OEM composite manufacturer. Capricorn Partners Leads round of financing .

LEUVEN, Belgium, April 6, 2021 — REIN4CED NV, a Belgian manufacturer of advanced composite bicycle frames has successfully completed a series B capital increase of € 7.0 million led by Capricorn Partners. The investment was carried by the Capricorn Sustainable Chemistry Fund and Quest for Growth, who respectively invested € 2.5 and € 1.5 million in the company. Investors of the early hour, Gemma Frisius Fund, Finindus and Innovation Fund also participated in this round. This capital injection supports the company's ambitious growth trajectory to become the leading supplier of lightweight, strong and durable materials to the bicycle, automotive and aerospace market.

Ludwig Goris, Senior Investment Manager at Capricorn states *“At Capricorn we have been following the company since 2017 and are very impressed with the trajectory this team has realized. As investor in chemicals and materials, we know the time and challenges it can take to start a new production facility from scratch. Today, we are delighted to further support the company in its upscaling and realize the full potential of its unique product offering”*

Durable materials and sustainable production processes

REIN4CED's advanced composites combine the excellent stiffness and light-weight properties of traditional carbon fiber with the toughness of ductile steel, making it the material of choice for every application where weight, stiffness and impact resistance (i.e. safety) are crucial. These attributes also contribute to a substantial increase in product durability, thereby expanding the lifecycle of all REIN4CED products. In addition, the use of thermoplastic resins guarantees a better end-of-life reusability .. The highly automated manufacturing line creates significant advantages towards supply chain management (reshoring) and manufacturing flexibility.

Global supply chain is slowly shifting to local supply chain

The company has now firmly established its value proposition in the bicycle market, where it is supplying frames for various models to its European customer portfolio. The current capital increase significantly strengthens the company's abilities to expand its manufacturing capacity, meet growing customer demand and develop new applications in sports & leisure, automotive and aerospace markets.

“Due to supply chain challenges caused by COVID-19, many European based bicycle brands have accelerated their strategic search to centralize their operations and are investigating how to bring their production closer to their respective markets,” says Michaël Callens, CEO of REIN4CED. *“REIN4CED can play an important role in this supply chain improvement. At REIN4CED we are focused on providing our customers with the latest in material technologies combined with an automated production process. Our early involvement in the product design and development process of our customers, ensures an efficient process and allows their engineers to come up with exciting innovations that go beyond the current state of bicycle technology.”*

About REIN4CED

REIN4CED is a Belgian innovative manufacturing company. In its production facility in Leuven, REIN4CED manufactures impact-resistant and lightweight bicycle frames for brands wishing to offer their cyclists maximum performance with enhanced safety and durability. The new breed of carbon fiber bikes are produced on an automated line using thermoplastic composites and REIN4CED's proprietary, impact-resistant "FEATHER" material. REIN4CED allows commercial carbon frame production in Europe for the first time, introducing significant logistic advantages and increased supply chain flexibility and efficiency.
